

Greg Finney, Managing Director, Practical Audio Visual

“Our recent outdoor projection installation at The Marlowe theatre in Canterbury presented some interesting challenges - we needed a secure, permanent, street-level projector enclosure which could be installed with minimum fuss in a busy public space.

Working with Vizbox we found the ideal solution.

Their steel enclosures are secure and extremely robust and allowed us to integrate an 8000Lumen laser projector, media player, control system and WiFi network in one environmentally controlled enclosure.

We found the Vizbox team to be both knowledgeable and flexible in helping us put together the enclosure design, and the end results were fantastic.

The people of Canterbury get to enjoy the lightshow, with the AV gear secure and out of sight in the background – just as it should be.”
